

1. Current user view

2. Same view with eye gaze and UI element overlaid

3. Text instruction

Compare these two identical views from a head-mounted camera. The right image has a UI element overlaid. Should the element be visible in the user's current field of view?

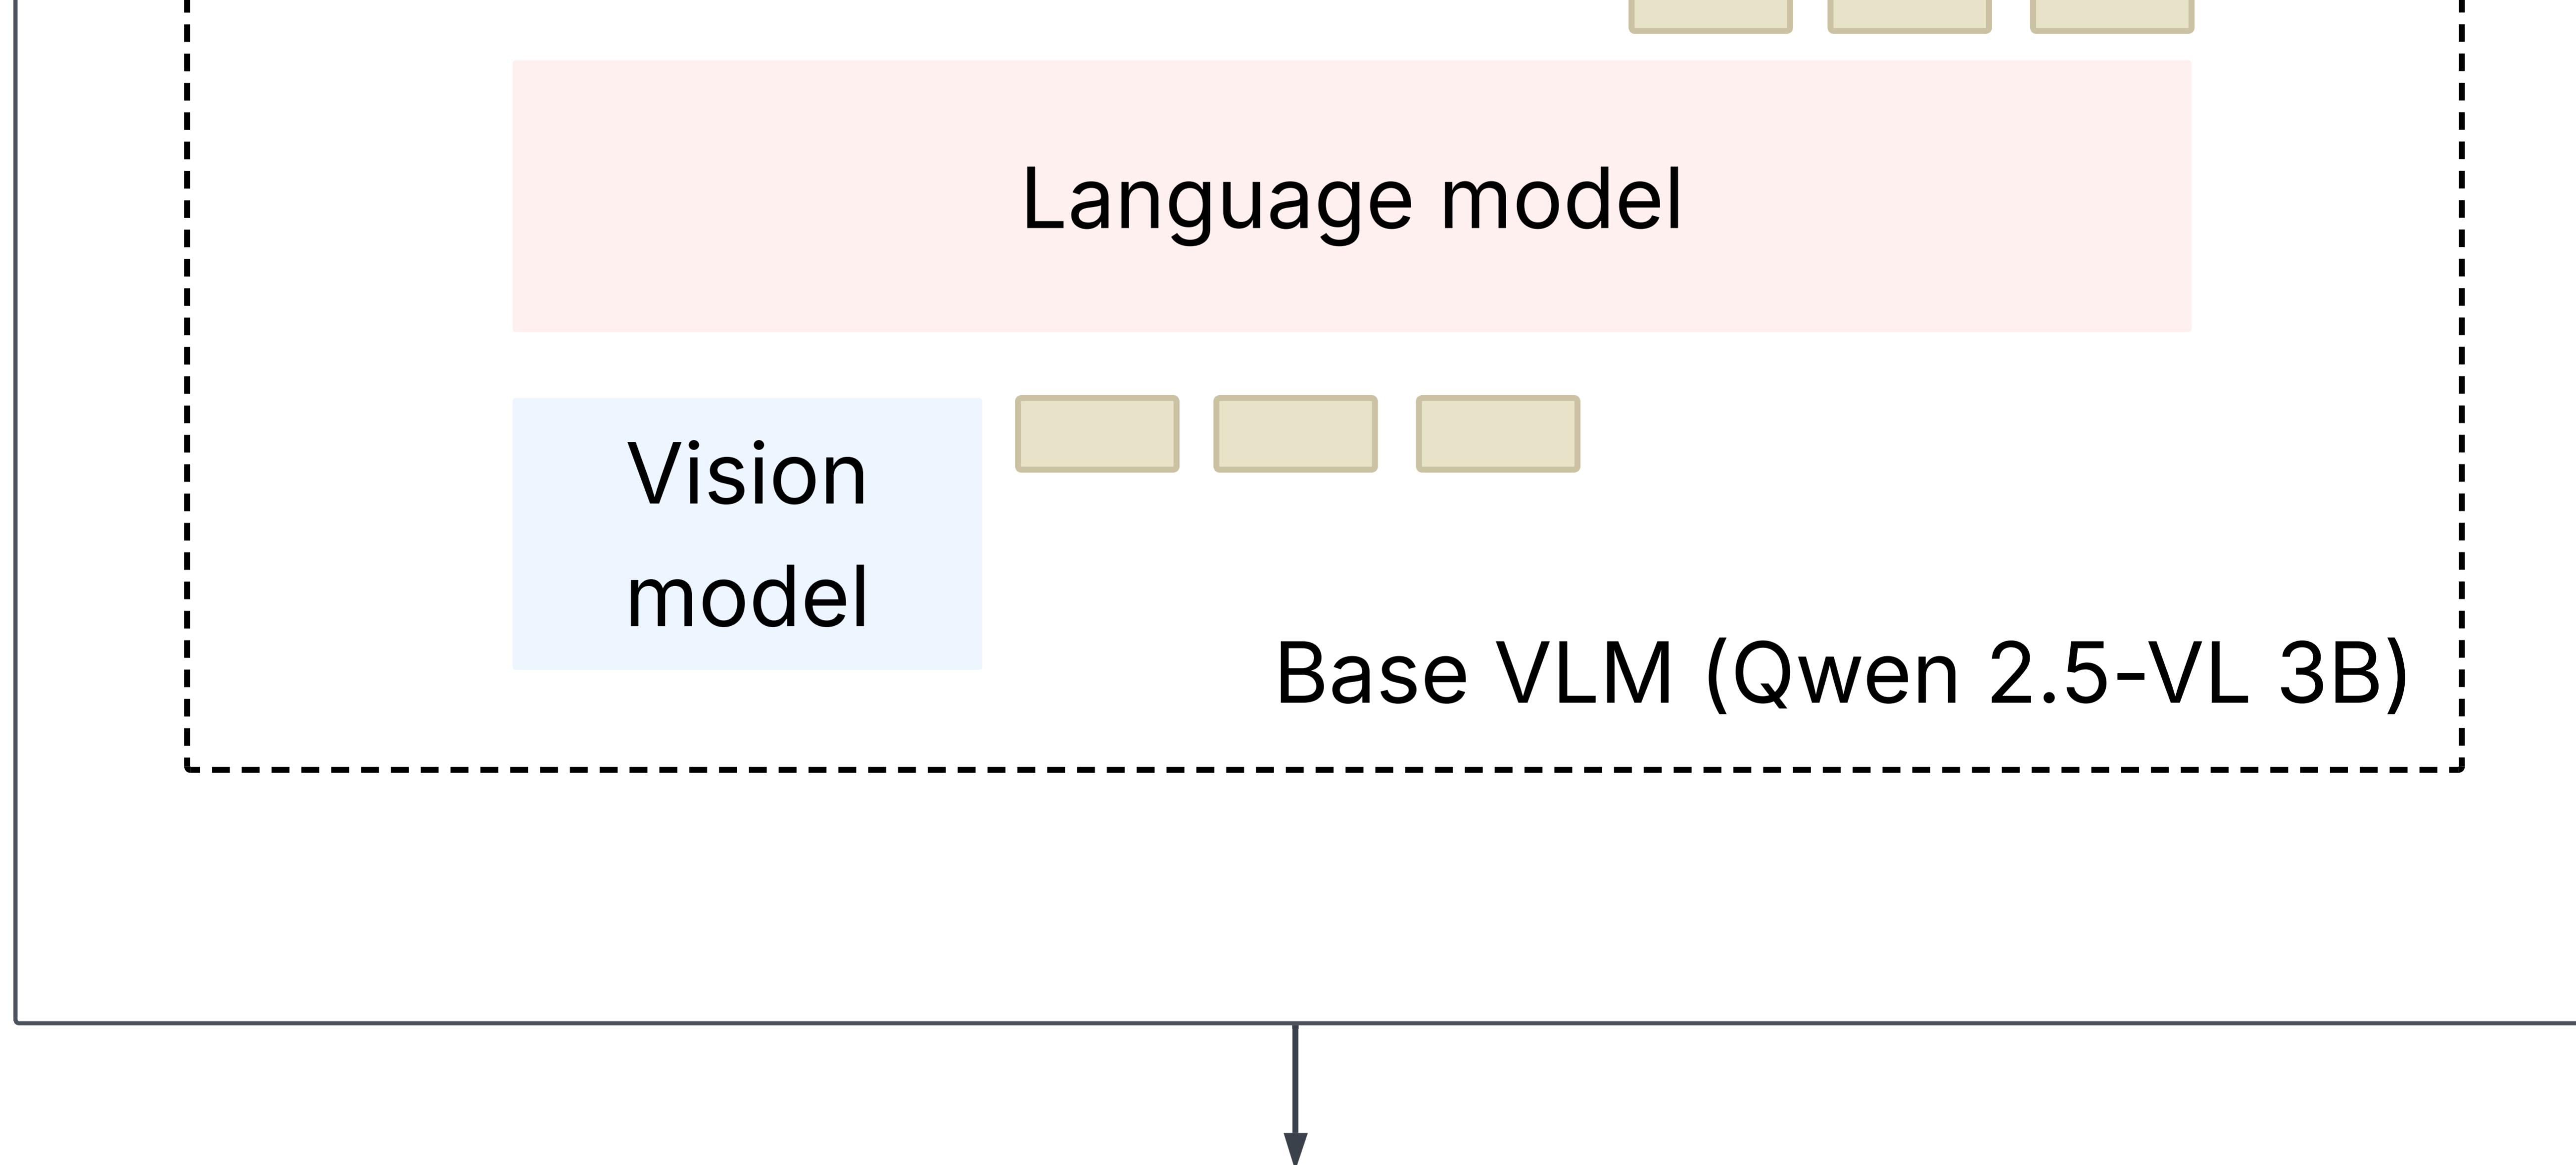

4. Target label

No

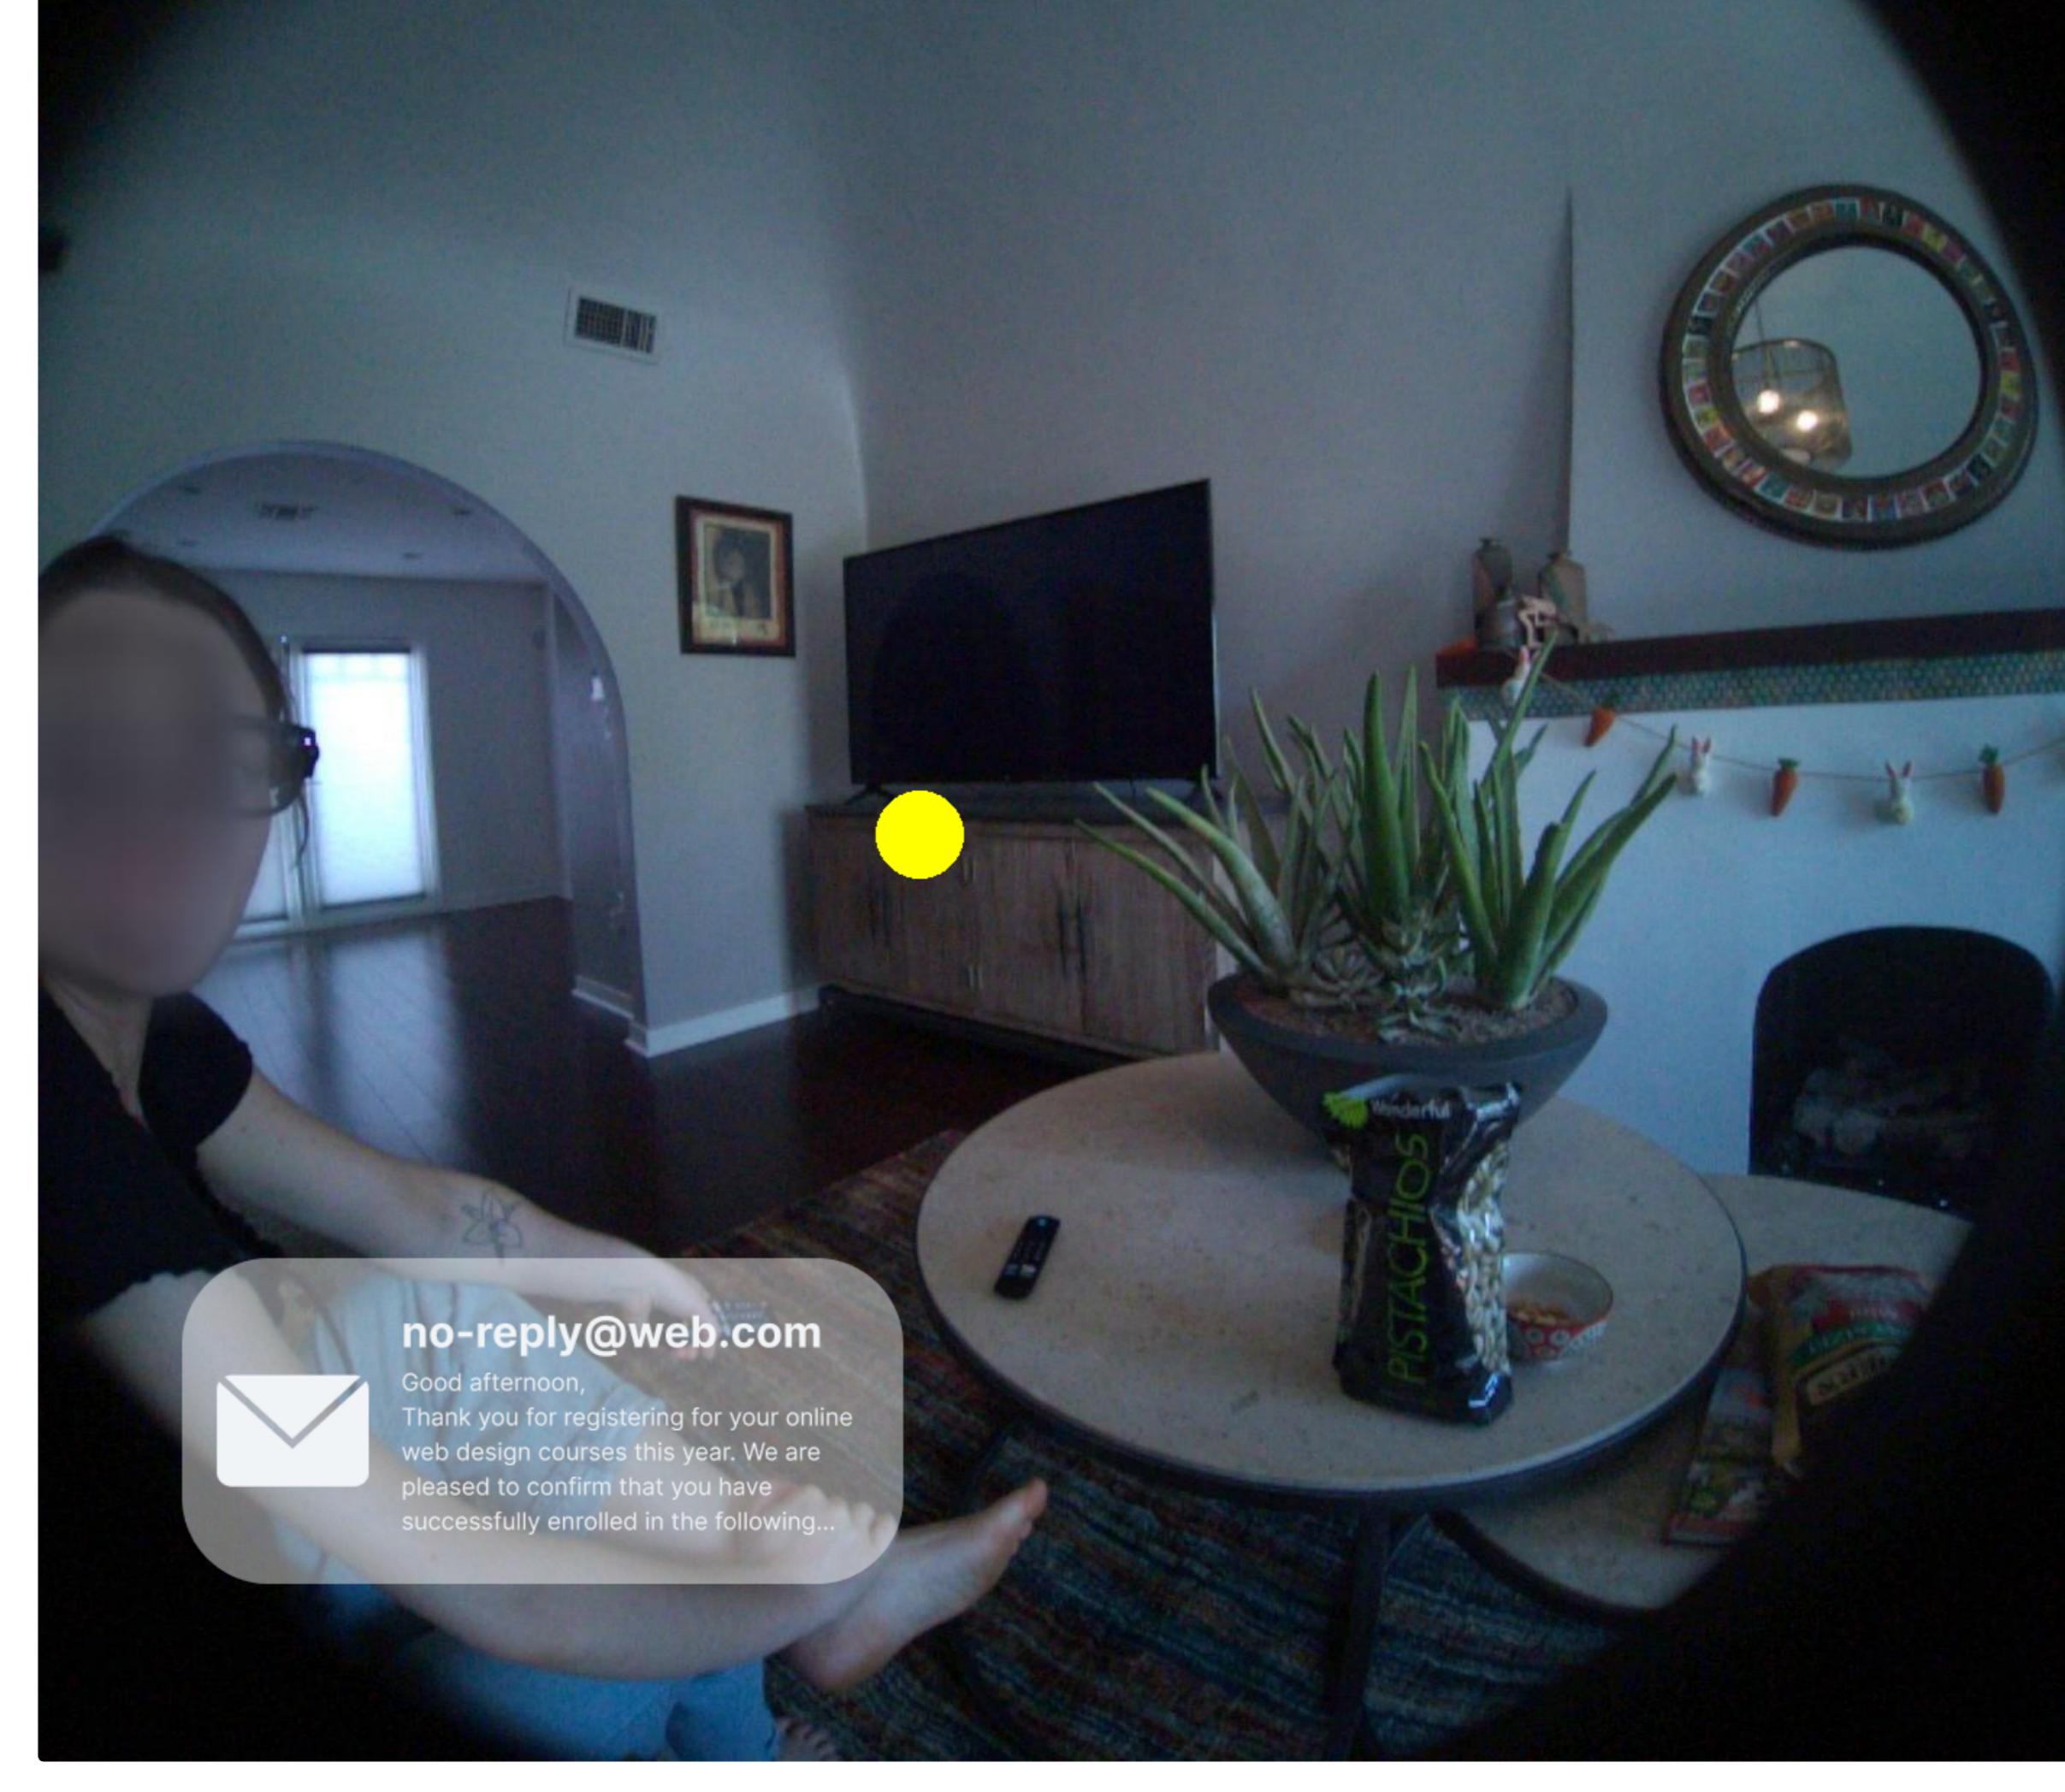

UiVLA

Vision-Language Action Model

Fine-tune VLM with UI adaptations

User: Compare these two identical views from a head-mounted camera. The right image has a UI element overlaid. Should the element be visible in the user's current field of view?

UiVLA: No, remove the element. The element is blocking the user's view of the other person.
